

AKBAR DANIAL AKMA

Senior Software Engineer

+62 813 8889 3502 • akbarajo1234@gmail.com • www.akbarakma.com • github.com/akbarakma

SUMMARY

Software Engineer with 6+ years of experience delivering production systems across backend and frontend. Specialised in backend development using NodeJS, TypeScript, Golang, Python and PostgreSQL, with hands-on experience building APIs, integrating third-party services, and supporting high-volume transactional systems. Currently building document-AI platforms for Indonesian healthcare and government institutions, where a wrong answer is expensive. Comfortable working end to end, from system design to deployment in cloud environments.

EXPERIENCE

Senior Software Engineer at Juxta Labs 2026 - Current
Enterprise document AI • Jakarta, Indonesia

- Built a monitoring console for a production claim-coding AI pipeline (FastAPI, React, PostgreSQL): latency percentiles, error drill-downs and per-request traces over a service operations could previously only read through logs.
- Instrumented the AI pipeline itself with a best-effort, PII-scrubbed telemetry writer that records per-stage traces and model recommendations without adding latency or a new failure mode to the request path.
- Designed a 63-table Finance and HR ERP for a hospital group at Dynamics AX 2012 feature parity, on one shared ledger with posting profiles that keep GL account numbers out of application code.
- Shipped an internal scheduling and assignment dashboard for a national health regulator, from schema design to production deployment.

Senior Software Engineer at Sicepat Ekspres Indonesia 2022 - 2026
Logistics • Jakarta, Indonesia

- Developed an event-driven Pickup Request Service using NodeJS, TypeScript, PostgreSQL and Kafka, handling hundreds of thousands to millions of requests on campaign days while maintaining data consistency across services.
- Optimised backend systems for core logistics workflows by tuning PostgreSQL queries and indexes, reducing API response times by 30-50% on high-traffic endpoints.
- Led the migration of the Mobile Pickup backend from a legacy system to an in-house Golang service, improving reliability of daily pickup processing during peak operations.
- Implemented asynchronous processing and message-based synchronisation with Kafka, improving system stability under high load and reducing request failures during traffic spikes.

Full Stack Engineer at Hubbed 2022 - 2022
E-commerce and inventory • Singapore

- Built an e-commerce and inventory management system integrating the Shopee and Lazada APIs, enabling automated order ingestion and inventory synchronisation across platforms.
- Implemented near real-time stock and order syncing, cutting manual reconciliation and preventing overselling across multiple sales channels.

Backend Developer at Valhalla Technologies 2020 - 2021
Mobile apps • London, UK

- Led backend development for multiple mobile applications from concept to production, designing RESTful APIs, authentication flows, and data models.
- Built the backend for a voice-based social app (Tannoi) with cloud storage and social login across Google, Facebook and Apple, plus deep linking and real-time chat for two further apps (Fourz, Wrga).

SKILLS

Backend	Node.js, Express.js, NestJS, TypeScript, Golang, Python, FastAPI, PHP
Data	PostgreSQL, MongoDB, MariaDB, Redis, Kafka, Snowflake
Frontend	React, Next.js, Redux, HTML, CSS
Cloud	AWS, Google Cloud Platform, DigitalOcean, Docker, Nginx
AI	LLM integration, prompt engineering, agent workflows, RAG

EDUCATION

Universitas Lampung Computer Science
Hacktiv8 Indonesia Fullstack Javascript Developer
